

We are proud to announce that MOMO v2 Launchpad will enact a new, optional improved insurance protocol “**MOMO v2 Insurance Protocol**”.

Additionally, MOMO v2 Launchpad’s **General Refund Insurance** will include some **modifications** which will be **detailed down below**.

As always, MOMO v2 strives to create the optimal grounds for all parties. With great versatility and all the resources we need at our disposal; we will continue to adapt with the aim of minimizing uncertainties, optimizing exposure and diversification in many dimensions.

What is MOMO v2 Insurance Protocol ?

MOMO v2 **Insurance Protocol** is an optional, improved insurance protocol that protects presale investors throughout the sale deal’s pre-determined vesting period.

MOMO v2 **Insurance Protocol is triggered** when a TIS-protected IDO project tokens perform **under** the IDO price for **7 consecutive days**, and all IDO participants are **refunded** the remainder of the vesting.

The **protection** for the first portion of vesting schedule (**TGE distribution**) is **nullified** if the token price **sustains** the IDO price for **4 hours** after **distribution**.

Exceptions to the Protocol

- If the project achieves and **sustains 100% ROI** for **4 hours** in the first **24 hours** after the **TGE token distribution**, the protocol is nullified (**e.g.** if a project with 20% vesting at TGE sustains 5 times IDO prices as the minimum price for 4 hours continuously in the first day of listing, they are no longer subject to the protocol rules)

If a project has **100% TGE vesting**, and agrees to MOMO v2 Insurance protocol, they only need to **sustain IDO price for 24 hours**, in accordance with the above exception

- If a project agrees to MOMO v2 insurance protocol, they are **exempt from any additional monetary penalties** that may occur via the General Refund Insurance we execute by default in all IDOs
- If MOMO v2 Team **detects intention** to **exploit** the Insurance protocol rules (such as resetting the trigger countdown by making large null-trades) or similar **ill-intent**, the community will be **informed** and a **DAO Vote** among holders will take place regarding the **course of action**
- **Failure to ensure** that all IDO-round participants **receive** their **tokens timely**, without unfair advantage, during distribution will **trigger** refund

- **Failure in adding and locking the pre-agreed amount of liquidity upon 1 hour of listing, unless a delay is announced, will trigger refund**
- **Failure to adhere to the pre-agreed vesting schedule and initial market capitalization during TGE will trigger refund**
- **Lack of communication and information in the period until the listing, or the presence of significantly unprofessional actions and behavior by project teams towards MOMO v2 team, investors or any other Ecosystem stakeholders will trigger refund process**
